Our Goal

In today's information age, things are becoming increasingly quantifiable, which means exponential expansion of available data to businesses, both internally and externally. Companies place their hope on data for unprecedented business opportunities.

However, business operations (existing human behavior, processes, and tools around data) are becoming more and more complex, and are not optimized to explore these opportunities.

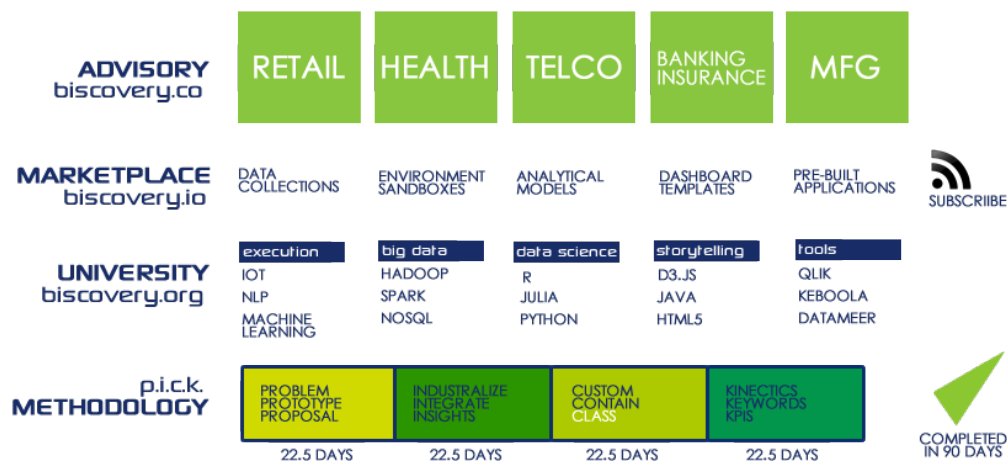

Biscovery excels in harvesting Big Data, creating Data Lakes, creating Data Science applications, offering Machine Learning automated services, and producing Virtual Reality content and visualizations.

This complexity is posing difficult business challenges and obstacles. Biscovery helps companies identify these problems, effectively and cost-efficiently turn data into business improvement solutions, and finally generate value.

Our goal is not to be forever billable. Our goal is to teach you how to interpret the success patterns of your business that generate you revenue – within 90 days.

We believe that Biscovery is one of the very few pioneers that are providing an innovative approach to operation efficiency, problem resolution, and rapid product creation.

Our Focus

P.I.C.K.

We offer 90-day build-data-to-business solutions where we go from problem to prototype in less than twelve weeks using a new methodology that we entitle P.I.C.K that highlights Prototyping, Integration, Customization, and measuring Key Performance Indicators in a rapid fashion.

Advisory

Our operation improvement advisory service team is fantastic at identifying business problems and formulizing targeted solutions quickly. We do not just write Word documents that describe the problem in-depth with possible attack paths. The team also possesses highly qualified advisory, technical and data science backgrounds that can install the tools/applications to the clients.

Enablement

Through our **Biscovery University** (biscovery.org) we offer 5 day crash courses to get your business and technical savvy teams understanding, building and customizing solutions around Hadoop, Spark, Python, R, and using code templates to jump start Machine Learning opportunities including creating bots. This also covers the creation of Virtual Reality around visualization of insights and augmented reality applications.

Marketplace

Biscovey Marketplace (biscovey.io) offers free dashboards, HTML5 components, code snippets, and how to create your own analytical applications to help you gain insights. We also pre-build environments into sandboxes using virtualization software to allow customers to deploy quickly.

Data Science Kit

As one of Hong Kong's Mobility Partners, we are offering a pre-bundling of hardware to kickstart data science work within an organization.
